The following is the process for encrypting a USB drive using Credant EMS.

1) Plug the drive into the computer
2) You will see the following prompt. Pressing **Yes** will encrypt the drive. Pressing **No** will not encrypt the drive but you will only have READ access to the drive.

3) Once you press **Yes** you will be asked to create a password for the device.
4) Credant EMS will be installed on the drive.

![Shielding External Device]

Your external device is being shielded. Do not eject your device until this process is complete!

Volume: DISKGO (F:)

5) Once EMS is installed all files on the drive will be encrypted. Any new files added will be automatically encrypted.

![External Media Device Protected]

Existing files on this device are now being scanned and encrypted, per security policy. This may take some time, depending on the amount of data.

From this point on, new files added to this device will be automatically encrypted.

Volume: DISKGO (F:)

OK
