You should use the EMS Service on any non-SOM computer that you use often and have administrative rights on. You will have to reboot to complete these instructions.

1) Plug the drive into the computer
2) After you connect the drive to the computer, run AccessEncryptedFiles.exe from drive which will bring up the window below.

3) Click “Install EMS Service” to begin the install.
4) After the install completes, you will need to REBOOT your computer.
5) In the future when you plug in an encrypted drive, you will get a password prompt asking for the password for the drive.

![Password Prompt](image)

6) After the password is entered, you may use the device as a normal USB drive.
